

Phishing Awareness Training

Internship Task 2
Prepared by: Maham Riaz

What is Phishing?

- Phishing is a cyberattack where attackers impersonate trusted organizations.
- The goal is to steal sensitive information such as usernames, passwords, and banking details.
- Phishing attacks are commonly delivered through emails, text messages, and fake websites.

Types of Phishing Attacks

- Email Phishing
- Spear Phishing (targeted attacks)
- Whaling (targeting executives)
- Smishing (SMS phishing)
- Vishing (voice phishing)

How to Recognize a Phishing Email

- Suspicious sender address
- Urgent or threatening language
- Requests for personal information
- Unexpected attachments
- Suspicious links

Example of a Phishing Email

Subject: Your Account Will Be Suspended

Warning Signs:

- Generic greeting
- Urgent language
- Suspicious link
- Request for login credentials

Fake Websites

How to identify fake websites:

- Check the URL carefully
- Look for spelling mistakes
- Verify HTTPS connection
- Avoid clicking links from unknown emails

Social Engineering Techniques

Attackers often use:

- Fear
- Urgency
- Curiosity
- Authority
- Trust

Best Practices

- Verify sender identity
- Hover over links before clicking
- Use Multi-Factor Authentication (MFA)
- Keep software updated
- Report suspicious emails

Quiz

Question 1:

You receive an email asking you to verify your password immediately. What should you do?

- A. Click the link and enter credentials
- B. Verify through official channels (Correct)
- C. Ignore security warnings

Question 2:

Which of the following is a common sign of phishing?

- A. Official company domain
- B. Personalized communication
- C. Urgent language requesting immediate action (Correct)

Conclusion

- Think before you click.
- Verify before you trust.
- Report suspicious activities.
- Cybersecurity starts with awareness.
